

Streamline Planning: Restoring Our Planet One Project at a Time

Fieldbrook Nursery Hillside Restoration

Before invasive plant removal.

After invasive plant removal.

After native revegetation.

"Sam Polly is a rare individual. Possessing a broad knowledge base and numerous specialized skills, he has been--and continues to be--a tremendous asset to the form and function of our land. His expertise in pruning techniques, sustainable landscape, local food production, soil science and erosion control are impressive and are responsible for my heightened awareness as a landowner. Under his leadership, I am learning the importance of using native grasses and eliminating destructive, invasive non-native species. The early success we are experiencing getting plants to grow in a truly hostile environment is exciting. His role as educator and consultant to myself and our gardener is critical as we learn to become informed stewards of our property.

Sam Polly is a local 'treasure.' I wholeheartedly endorse his services to anyone or company lucky enough to have him work on their projects, lecture for their organizations or plan an approach for land use. We are fortunate to have such a dedicated, brilliant and cordial naturalist in our midst."
