

What Makes a Community Green?

Community Ecology: A green community uses its land wisely, offers multiple modes of transportation, provides open spaces for recreation and space for community agriculture and uses its resources, both natural and cultural, wisely.

Edible Landscapes

Wildlife Gardens

Invasive Species Management

Rain Gardens

Community Agriculture

Green Streets

Native Gardens

Green Roofs & Walls

Bike Friendly Streets

Green Parking

Soil & Water Management

Backyard Ecology

Alternative Lawns

Greenscaping: "Designed to help preserve natural resources and prevent waste and pollution, Greenscapes encourage companies, government agencies, other entities, and homeowners to make more holistic decisions regarding waste generation and disposal and the associated impacts on land, water, air and energy use."
